## Challenges Faced

### Tracking Student Devices

With more devices going home with students, tracking which student had which device was cumbersome.

### Collecting Required Signatures

Attempting to collect signatures for Acceptable Use Agreements and other forms was a manual, paperwork intensive process.

### No Interaction Between Systems

Having separate systems to track students and assets with no integration caused a lot of duplicate work.

## How We Helped

### A Customized Solution

We were able to customize the system to fit the specific processes and needs of our school system.

### Everything In One Place

Everything we needed including asset management, asset assignment, e-signatures, fees, and much more were all together.

### Reports on Demand

Between standard and custom reports, we have access to all the data we need when we need it.
