

SOMERS CENTRAL SCHOOL DISTRICT

Modernizing K-12 Asset Management with
One to One Plus

Overview

Somers Central School District, located in New York, serves approximately 2,568 students across four schools. After outgrowing multiple legacy asset management systems, the district needed a solution better suited for managing student and staff devices while simplifying technology operations. By implementing One to One Plus, Somers Central gained a centralized platform that streamlined asset management, automated key processes, and improved visibility across its technology environment. The result has been greater efficiency, easier device management, and a technology platform built specifically for K-12 schools.

What they say:

"If there were a way to bottle their responsiveness, professionalism, and overall customer service, it could be sold at a high premium."

At a Glance

Challenges

- Legacy systems limited device tracking and staff efficiency
- Manual processes made technology management more time-consuming

Benefits

- Automated integrations reduced manual work across multiple systems
- Centralized platform simplified asset management and auditing

The Challenges

Before implementing One to One Plus, Somers Central School District relied on multiple asset management systems. While these platforms handled basic inventory functions, they lacked the flexibility and education-specific features needed to effectively manage devices assigned to students and staff. Tracking assets, managing workflows, and maintaining accurate records required unnecessary effort, while several important technology management capabilities simply were not available. The district needed a solution that could centralize operations and better support its growing technology program.

How One to One Plus Helped

One to One Plus delivered nearly everything the district needed immediately without extensive customization. Beyond simplifying asset management, the platform introduced capabilities that the district had not previously considered, including Integrated Email Correspondence, Loaners, Parts Inventory, Invoicing, and Auditing. Daily operations became more efficient through features like Custom Views, streamlined auditing, and MySchoolBucks billing integration. Automated connections with Intune, Jamf, Infinite Campus, and Microsoft eliminated many manual processes while keeping devices, users, and inventory synchronized across systems. The implementation itself was smooth and straightforward, allowing the district to transition quickly with minimal effort. One area that continues to stand out is customer support. The district consistently praises the responsiveness, professionalism, and product knowledge of the One to One Plus team, describing every interaction as evidence of a company that is passionate about helping schools succeed.

Conclusion

By implementing One to One Plus, Somers Central School District replaced outdated asset management systems with a comprehensive platform built specifically for K-12 technology departments. Today, the district benefits from automated integrations, simplified auditing, improved device visibility, and efficient technology workflows all while being backed by exceptional customer support. Combined with the platform's extensive feature set and overall value, One to One Plus has become an easy long-term investment for the district's technology program.
